

Fluorescence in a Whole New Light™

BARRIER FILTER INSPECTION GLASSES

The BlueLine filter glasses are designed to work with the BlueLine lights to provide maximum contrast for seeing fluorescent indications. The glasses block all of the blue light that is reflected from the inspection surface and transmit only the fluorescence from the indication.

You cannot use just any yellow glasses (shooting glasses, blueblocks, etc.) with the BlueLine lights. The BlueLine filter glasses are specially designed to work together with the BlueLine lights for maximum rejection of reflected light to give you maximum viewing contrast. Use only filter glasses marked with the BlueLine NDT name.

Safety glasses

All of the filter glasses conform to ANSI Z87.1 impact standards for safety glasses.

The glasses are available in three styles.

Model FG1, basic safety glasses style.

Can be used over eyeglasses.

Model FG2, a bit more stylish.

Can be used over eyeglasses.

Model FG3, tops in style. Earpiece length is adjustable

Not for use over eyeglasses.
